```
3) (10 pts) ALG (Stacks)
```

A stack of *positive integers* is implemented using the struct shown below. Using this implementation of the stack write the *push* and *peek* functions. Assume that when a struct stack is empty, its top variable is equal to -1.

```
#define MAX 12

struct stack{
   int top;   /* indicates index of top */
   int nodes[MAX];
};

// Attempts to push value onto the stack pointed to by s.

// If the stack is full 0 is returned and no action is taken.

// Otherwise, value is pushed onto the stack and 1 is returned.
int push(struct stack* s, int value){
```

```
}
// Returns the value at the top of the stack. If the stack is
// empty, -1 is returned.
int peek(struct stack* s){
```

}
