Summer 2018 Algorithms and Analysis Tools Exam, Part A

2) (5 pts) ANL (Algorithm Analysis)

An algorithm to process an array of size n takes $O(n\sqrt{n})$ time. For n = 640,000, the algorithm runs in 256 milliseconds. How many *seconds* should the algorithm take to run for an input size of n = 1,000,000?
