Spring 2022 Section C: Algorithms Analysis

2) (10 pts) ANL (Algorithm Analysis)

An algorithm processes an array of size r by c in $O(rc^2)$ time. For an array of size r = 200 and c = 500, the algorithm takes 5.0 seconds. How long, in seconds, will the algorithm take to process an input array of size r = 800 and c = 300? Please express your answer with exactly one digit after the decimal point.
